

## IZO-X

Isolated USB / DMX interface

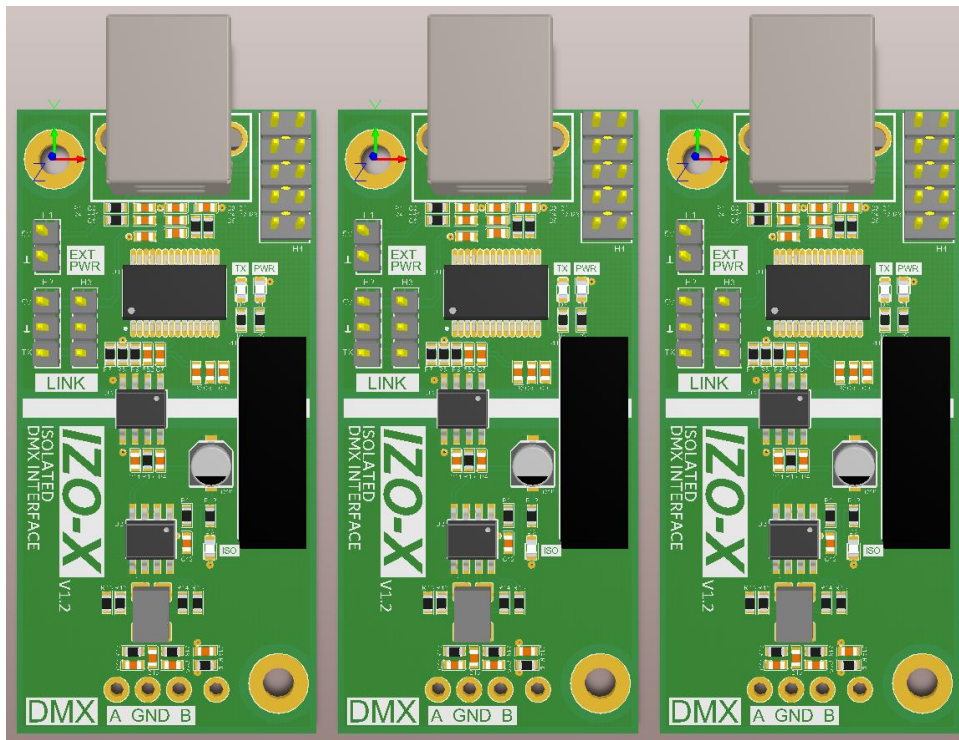

With the IZO-X USB/DMX interface you open the door to professional stage lighting. With a PC application you will easily control a complete universe of DMX lights.

The IZO-X interface has an isolated DMX output which means there are no connection whatsoever between the PC and the light fixtures. This gives a clean DMX signal free of ground interference and also provides a safe way to connect your equipment together.

The IZO-X interface has extra features which makes building of a complete DMX system easy:

- Header for direct connection between a PC motherboard and IZO-X, in case you want to build the interface inside a computer cabinet.
- Option to use external +5V powersupply and not use USB power.
- Link both power and DMX signal chained to several IZO-X interfaces in case you want to have several isolated DMX outputs.
- Output filter to attenuate interference and improve signal immunity to external RF.

Price:

1-9 pcs	50 Euro / pc
10-99 pcs	45 Euro / pc
100pcs +	40 Euro / pc
